Redline Communications and Business Communications Services (BCS) bring advanced Wireless Broadband Technologies to Bahrain

-- Redline's AN-50e approved by the Bahrain Telecommunications Regulatory Authority in Bahrain --

BAHRAIN – August 21, 2006 - Redline Communications, a leading provider of standards-based broadband wireless equipment, and Business Communications Services WLL (BCS), a leading provider of Information and Communications Technology (ICT), today announced that BCS has signed a Redline Certified Partner agreement to distribute and support Redline's wireless broadband products to the business community in Bahrain.

BCS has received a No Objection Certificate from the Telecommunications Regulatory Authority (TRA) stating that the TRA authorizes BCS to import Redline Communications AN-50e wireless broadband equipment into Bahrain. The TRA certificate also acknowledges that the AN-50e equipment conforms to TRA's Guide to Equipment Type Approval.

"BCS offers the expertise that companies need to manage the deployment of advanced wireless broadband networks that will meet their communications needs," said Kevin Sutor, Vice President, Marketing and Business Development, Redline Communications. "With the approval of our AN-50e, BCS can bring to market the world's most robust and reliable wireless broadband technologies to companies in Bahrain."

The Redline AN-50e is the world's first high-performance, low-cost, multi-service solution for businesses looking to expand their networks and provide high quality access. Operating within an TRA-approved frequency spectrum, Redline's AN-50e delivers an industry-leading 72 Mbps raw/49 Mbps net Ethernet throughput and supports both point-to-point (PTP) and point-to-multipoint (PMP), direct and non line-of-sight links.

Redline products deliver an unmatched combination of range, capacity, security, and reliability, even in very challenging environments like those found in Bahrain. Technology advantages include several patents necessary for building the OFDM-based wireless broadband systems that deliver robust, extreme-distance/high-bandwidth performance. Built-in security encryption enables companies large and small to grow their systems into the future.

The wireless broadband industry has gained acceptance worldwide for use in critical communications infrastructure and Redline products remain at the forefront of this significant technology movement with successful installations in 75 countries across six continents.

Business Communications Services WLL installation personnel have been trained and certified by Redline and are waiting to assist you in incorporating this technology into your day-to-day network operations. Please contact BCS at 17564564 or email: info@bcs.bh.

About Business Communications Services W.L.L. (BCS)

Business Communications Services is a leading provider of Information and Communications Technology (ICT) in Bahrain.
