**Redline demonstrates world's first complete WiMAX Forum Certified™
WiMAX system at CeBIT 2006 in Hannover, Germany**

Hannover, Germany, (March 10, 2006)—Redline Communications, the leading provider of advanced broadband wireless access and backhaul solutions, is featuring live, over-the-air gaming and other high-bandwidth applications using its RedMAX base station and subscriber units - the world's first complete WiMAX Forum Certified™ WiMAX system. The demonstration is taking place at Redline's booth (Hall 15, Stand D66) at CeBIT 2006 in Hannover, Germany from March 9 to March 15.

"CeBIT visitors are among the first to experience fully certified Redline RedMAX WiMAX products in real-world applications," said Keith Doucet, Vice President, Marketing and Product Management, Redline Communications. "While there are many companies out there that claim to have WiMAX products, Redline is the first company in the world to have a complete WiMAX Forum Certified™ system. These live demonstrations at CeBIT are giving people the opportunity to experience WiMAX capabilities first hand."

Redline is hosting daily seminars on its RedMAX family of WiMAX products at the WiMAX Forum Pavilion (Hall 13, Stand D35) at CeBIT 2006. Redline will provide an overview of its current RedMAX deployments and share its expertise on planning and installing large-scale, carrier-class wireless systems.

Germany continues to be a major technology gateway for Central and Eastern Europe. Over the past few years the WiMAX industry has matured considerably to where it is now securely positioned to offer affordable, standards-based broadband access to all international markets, including those in Europe, Asia, Africa, and the Middle East. "The demand for proven WiMAX solutions is growing at unprecedented rates," said Mr. Doucet. "We're meeting this demand head on with our industry-leading RedMAX™ family of WiMAX products that offer unmatched performance and reliability."

2/...

Redline's award-winning WiMAX Forum Certified™ products showcased today incorporate the Intel® PRO/Wireless 5116 WiMAX broadband interface and enable carriers and service providers to quickly and cost-effectively deliver rich broadband services including voice, video and data to enterprise and residential subscribers. The RedMAX AN-100U base station and RedMAX SU-O and SU-I subscriber units are designed for the profitable deployment of point-to-multipoint and point-to-point wireless broadband networks and revenue-generating services.

"Operators around the world have already selected Redline's WiMAX products for nation-wide deployments and network trials," Mr. Doucet added. "RedMAX is helping them capitalize on opportunities to profitably roll-out the services and applications that drive their business forward."

Redline's RedMAX Family

Redline's WiMAX solutions are designed to operate in a wide range of network designs and deployments, including point-to-point and point-to-multi-point, in urban and rural geographies. The RedMAX carrier class Base Station (AN-100U) delivers voice, video, and prioritized data traffic to the RedMAX Subscriber Units, which feature the Intel® PRO/Wireless 5116 broadband interface.

About Redline Communications

Redline Communications is a technology leader in the design and manufacture of standards-based broadband wireless access solutions. Using industry leading OFDM technologies, Redline's award-winning products provide unmatched high capacity and non-line-of-sight capabilities with proven performance, reliability and security. Ideal for a variety of access, backhaul and private network applications, Redline products meet the needs of carriers, service providers and enterprises worldwide. Redline is a principal member of the WiMAX Forum™, and was first in the world to market an 802.16 compliant product. Redline has over 20,000 installations in 75 countries across six continents through a global distribution network of 80+ partners. For more information, visit www.redlinecommunications.com.
